

## Base4NFDI - A framework for Basic Service development

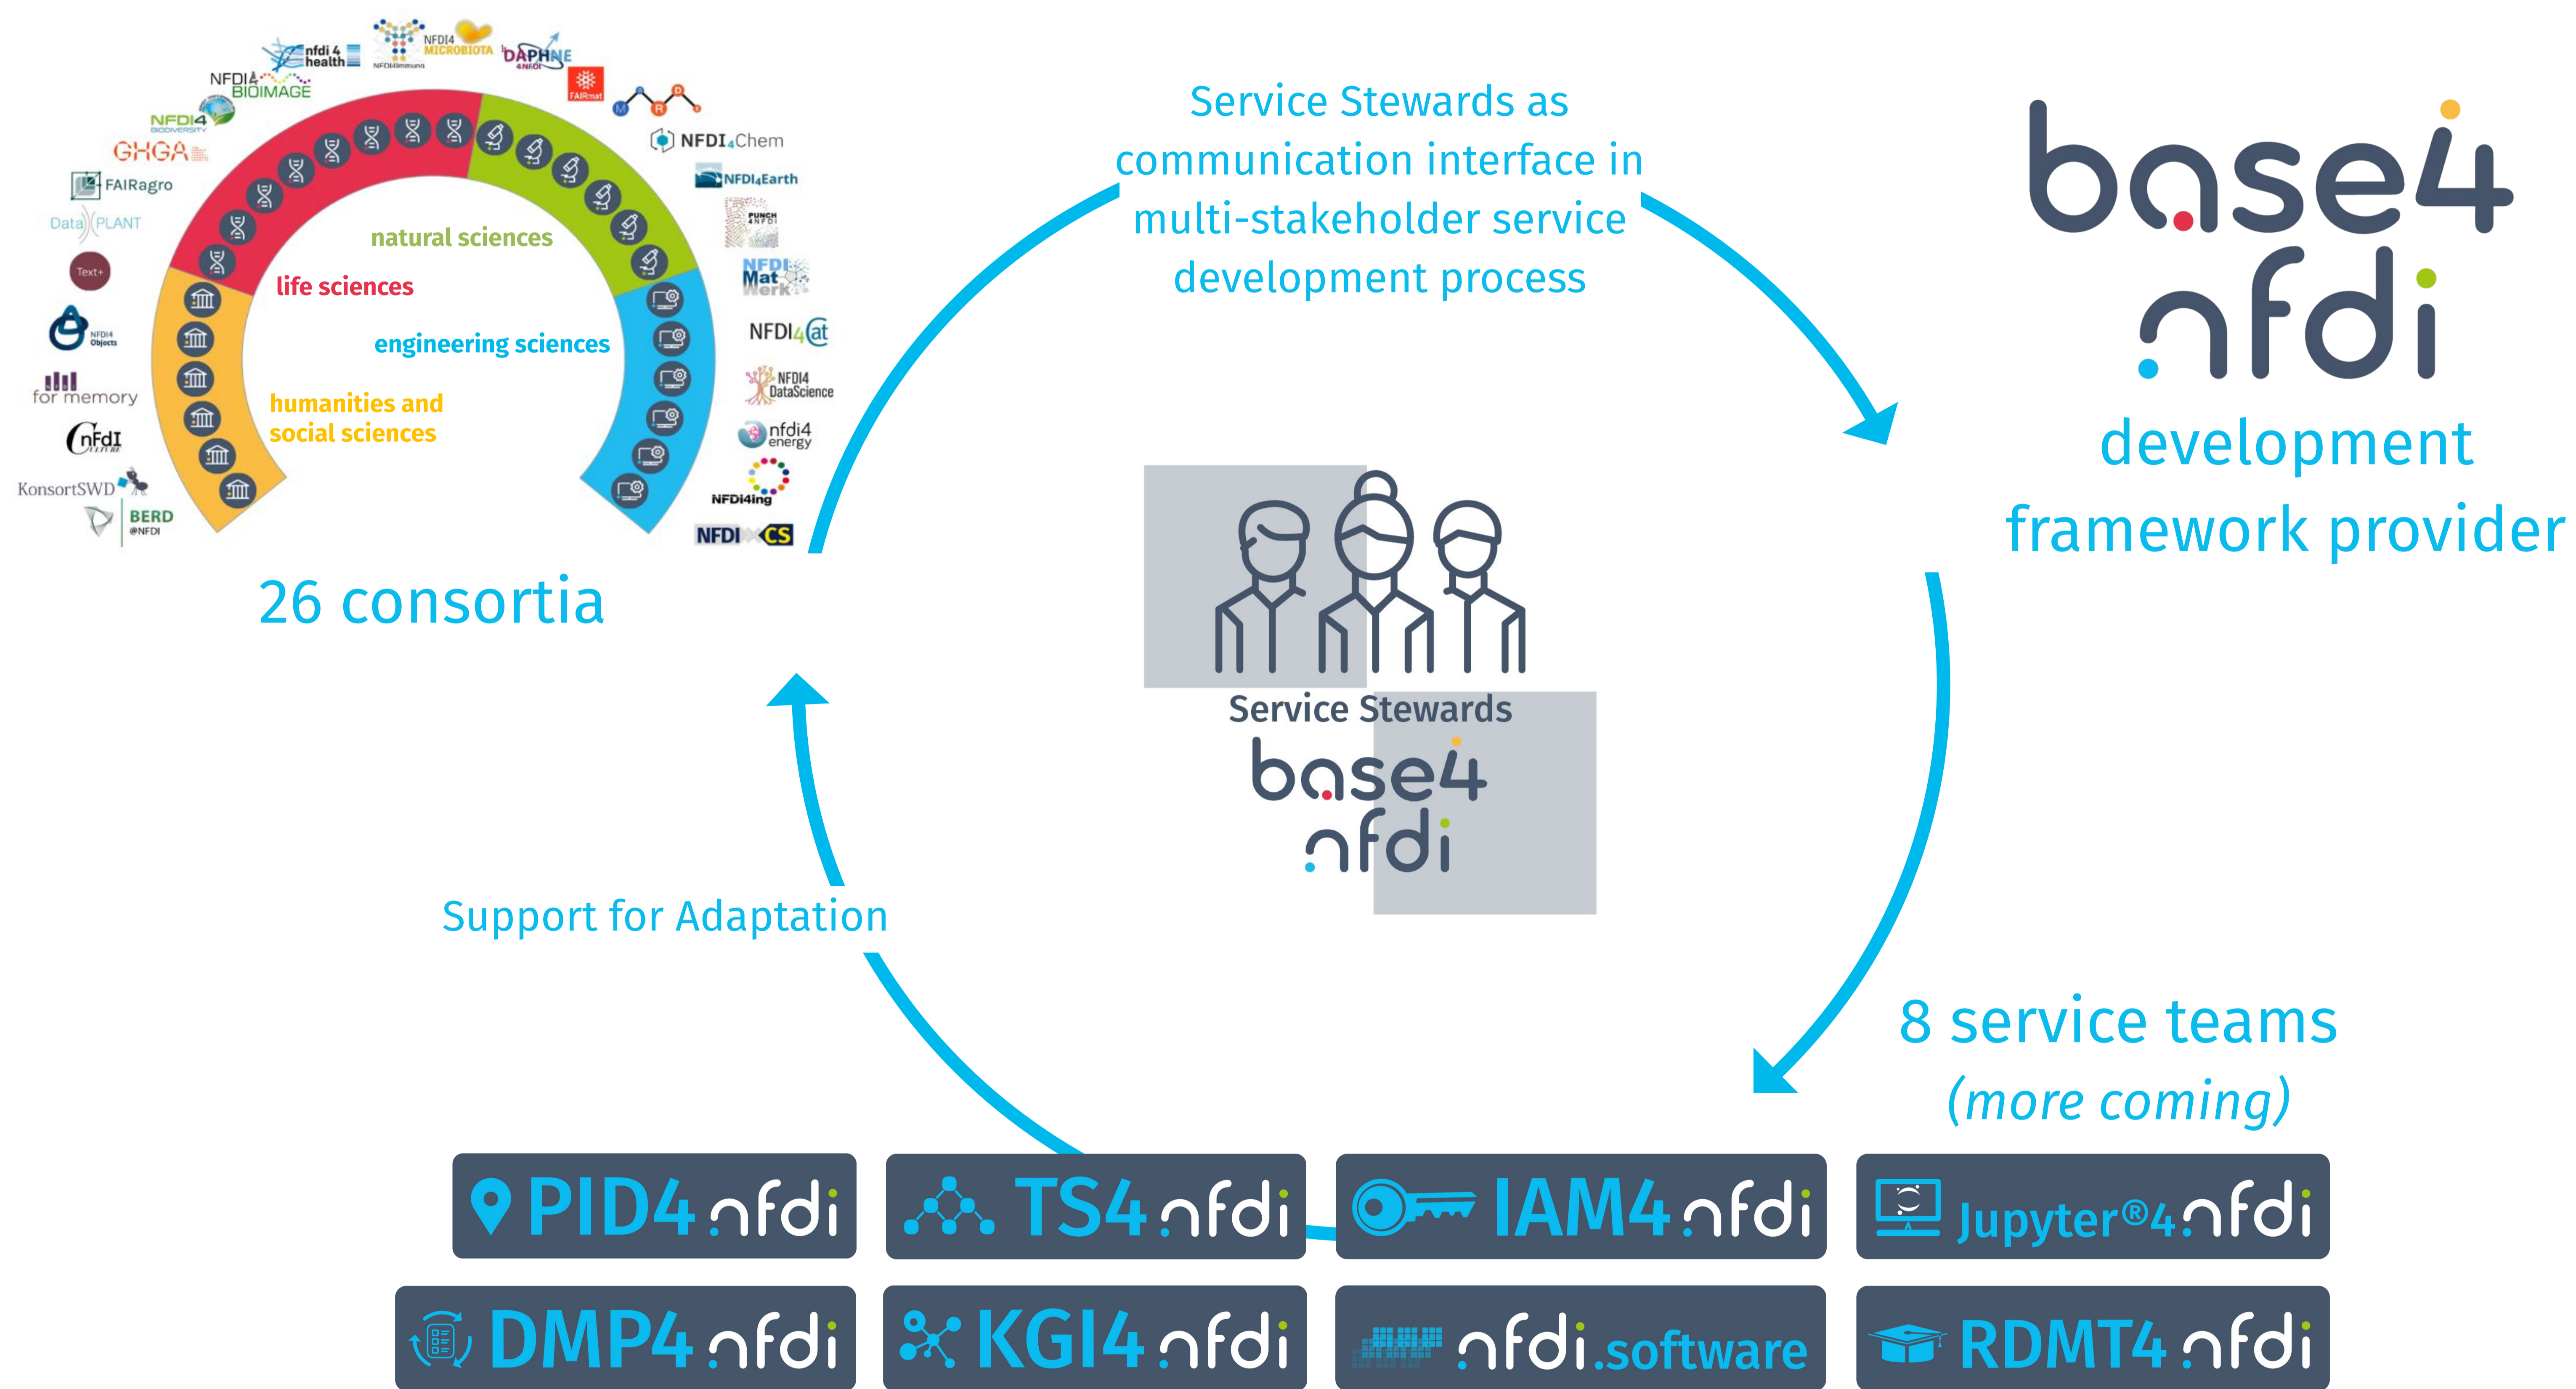

### What is the Goal of Base4NFDI?

- Establish NFDI-wide, community-built services for FAIR research data management.
- Ensure interoperability with (inter-)national infrastructures and policies.

A **basic service** is a technical-organisational solution which typically includes:

- storage and computing services
- software, processes and workflows
- personnel support for different service desks

## The emergence of a new support role: Service Stewards in Research Software Engineering

## Service Steward Support in Base4NFDI Service Development Process
