

A CORTICAL MICROCIRCUIT MODEL WITH MULTIPLE INTERNEURON CLASSES

IAS 2021 Presentation

April 16, 2021 | Han-Jia Jiang | INM-6, Jülich Research Centre, Germany

INTRODUCTION

- We develop a model of mouse barrel cortex incorporating three major classes of inhibitory interneurons (PV, SOM, VIP) to study their contributions in network dynamics and sensory signal processings

INTRODUCTION

- We develop a model of mouse barrel cortex incorporating three major classes of inhibitory interneurons (PV, SOM, VIP) to study their contributions in network dynamics and sensory signal processings

MODEL OVERVIEW

- Tool: NEST simulator (C++, python)
- Neuron model: leaky integrate-and-fire neuron

MODEL OVERVIEW

- Tool: NEST simulator (C++, python)
- Neuron model: leaky integrate-and-fire neuron
- N of neurons: 6450 (mouse C2 barrel column)

(Lefort et al., 2009, *Neuron*)

MODEL OVERVIEW

- Tool: NEST simulator (C++, python)
- Neuron model: leaky integrate-and-fire neuron
- N of neurons: 6450 (mouse C2 barrel column)

(Lefort et al., 2009, *Neuron*)

Figure: Connection probabilities

NETWORK GROUND STATE

- The simulated population firing rates are comparable to *in vivo* data (Yu et al., 2019, *Neuron*)

Figure: Population firing rates (filled) compared to *in vivo* data (hatched)

Figure: Raster plot

NETWORK DYNAMICS

- The L2/3 network responses to activation of PV, SOM, and VIP cells show their respective roles of inhibition and disinhibition

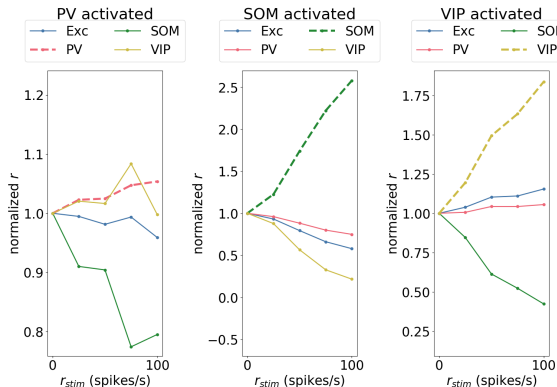

Figure: L2/3 network responses (normalized firing rates) to cell-type-specific stimulations

FUTURE WORKS

- Mechanistic and theoretical analysis
- Neurotransmitter effects (ACh)

FUTURE WORKS

- Mechanistic and theoretical analysis
- Neurotransmitter effects (ACh)
- Neuron-astrocyte interactions (to be developed in NEST)
 - Ca^{++} , IP_3 , slow inward current
 - tripartite synapse
 - networks of ~ 10000 cells
